

# 30 Days of Loop Logic & Condition Practice (Python)

## Day-wise Challenges:

- Day 1 (Sunday) – Print a 5x5 square of stars.
- Day 2 – Print a right-angled triangle of stars (increasing pattern).
- Day 3 – Print an inverted right-angled triangle of stars.
- Day 4 – Print a triangle of numbers like: 1 12 123
- Day 5 – Each row starts from 1 up to the row number (like above).
- Day 6 – Print a pyramid pattern of stars.
- Day 7 – Print an inverted pyramid of stars.
- Day 8 – Print a diamond pattern of stars.
- Day 9 – Print a triangle of even numbers only.
- Day 10 – Print a triangle of alphabets (A, AB, ABC...).
- Day 11 – Floyd's Triangle: 1 2 3 4 5 6
- Day 12 – Print a checkerboard of stars and spaces.
- Day 13 – Print a right-aligned triangle of stars.
- Day 14 – Print a triangle with same number in a row (1, 22, 333...).
- Day 15 – Print a triangle with continuous numbers.

- **Day 16** – Print Pascal's Triangle (basic, with loops only).
- **Day 17** – Triangle of odd numbers only.
- **Day 18** – Half diamond pattern using stars: \* \*\* \*\*\* \*\* \*
- **Day 19** – Triangle with decreasing numbers in a row.
- **Day 20** – Triangle where each row starts with the row number.
- **Day 21** – Multiplication table of a number (use input).
- **Day 22** – Check if a number is prime using loop + condition.
- **Day 23** – Print all primes up to N.
- **Day 24** – Check if a number is a palindrome using loop.
- **Day 25** – FizzBuzz from 1 to 100.
- **Day 26** – Sum of digits of a number using loops.
- **Day 27** – Factorial of a number using loop.
- **Day 28** – Basic ATM simulation (loop until user exits).
- **Day 29** – Simulate 3 login attempts (loop + condition).
- **Day 30** – Print a number/star X-pattern (advanced).
